

CNTechnolabs_Autoinvoice

Introduction :

The Magento 2 Auto Invoice extension streamlines the payment workflow within Magento 2 by automatically creating invoices. This enhancement is particularly valuable for payment methods such as offline orders, where Magento 2 lacks native support for automated invoice generation. By implementing this extension, merchants can expedite their payment processes, leading to increased efficiency and smoother transactions.

About the Extension:

Utilizing an extension is an excellent strategy to cut down on the laborious task of manually generating invoices. With Magento 2 Auto Invoice, the process becomes even smoother as it automatically dispatches invoice emails to your clients immediately after an order is placed. This automation not only saves time but also ensures that your clients receive prompt notifications, enhancing the efficiency and professionalism of your business operations.

Key Features:

1. Seamless installation and configuration make integration with your store a breeze.
2. Conveniently enable or disable the extension directly from the backend of your store.
3. Streamlines the order process effortlessly, ensuring a swift and automated experience.
4. Automatically generates invoices and initiates shipment processes for customers immediately upon placement of their orders.

How it Works:

Upon installation, the "Auto invoice" module seamlessly integrates into the Magento Admin Panel. Administrators can navigate to the appropriate section within the backend configuration.

From Admin Configuration we just need select appropriate option

One or more of the Cache Types are invalidated: Configuration, Page Cache. Please go to [Cache Management](#) and refresh cache types.

Benefits:

- **Time-saving Automation:** By automatically generating invoices/shipment for orders, the extension eliminates the need for manual invoice/shipment creation, saving merchants valuable time and effort.

- **Improved Efficiency:** With invoices/shipment generated automatically, the order processing workflow becomes more streamlined and efficient, reducing the risk of errors and delays.

Conclusion:

The Magento 2 auto invoice and shipment extension streamlines the order processing journey, ensuring swift and efficient operations. By instantly generating invoices and shipments upon order completion and payment, it eliminates delays and manual interventions, enhancing the overall efficiency of the process.
